

Solutions Overview:

IntraLearn offers an integrated suite of products that includes authoring, content management, collaboration and skills management as well as a learning management system to deliver, measure and manage learning over the Internet and intranets. The IntraLearn modular approach to the market provides incremental functionality and price points to address a range of customer requirements. Integrated-on-demand, international localization, multiple virtual licenses, extensibility, multi-server and organizational mapping and reporting capabilities are clear product differentiators offering true scalability through the enterprise. The IntraLearn product suite is also further enhanced with strategic and technical relationships with best of breed partners.

The Solutions Suite:

IntraLearn SME

IntraLearn SME is an affordable elearning platform that enables small to mid-sized businesses, colleges, universities, and K-12 school systems to quickly create, manage and deliver interactive and measurable learning over the Internet and intranets. Highly scalable and secure, shrink-wrapped IntraLearn SME can be easily installed and configured in just hours and deployed in just a few days. IntraLearn SME is the choice for organisations looking for an affordable, feature-rich and fully integrated elearning product that they can begin using right out of the box.

IntraLearn XE

IntraLearn XE gives mid-sized corporations the ability to offer individual elearning platforms to their extended enterprise of suppliers, dealers, distributors, consumers, and various internal departments. IntraLearn XE builds on the powerful IntraLearn SME product by giving customers the ability to add unlimited Icosa ports to their main system. Each Icosa port is a complete IntraLearn platform with its own look, feel, language and shared courses.

IntraLearn XE was specifically developed to extend enterprise elearning with a system of unlimited, unique Icosa Learning Centres integrated into a single, centralised relational database.

With its unique architecture and licensing model, IntraLearn XE is changing the way learning is offered online. Enterprises can host multiple unique Icosa Learning Centres, each running the equivalent of a fully integrated elearning system and capable of offering thousands of course. IntraLearn XE pricing and distribution models, coupled with its e-Commerce and online registration capabilities, make offering courses and customised learning centres simple and secure, unique yet centrally managed.

IntraLearn e-360

The revolutionary IntraLearn e-360 enables companies to match learning outcomes to corporate objectives. Corporations can now manage the full 360-degree learning cycle essential to staying competitive in today's knowledge-based marketplace. From a single elearning platform, companies can match business objectives to skills required, assess employee skills and gaps, set learning objectives, create or obtain courseware, deliver and measure interactive learning, and gather and present the results.

IntraLearn e-360 integrates the features of expensive learning solutions into a single product with built-in course catalogues, remote registration, course creation, interactive delivery, assessments, and collaborative tools like chat, threaded discussions, email, whiteboards, internet links, and group/mentor rooms. Reports on learner progress and skill attainment are automatically generated.

IntraLearn e-360 integrates SkillBridge, which allows corporations to catalogue skills and proficiencies, align them with strategic objectives and quickly deliver targeted elearning to close those gaps. SkillBridge serves as a powerful decision support tool helping companies identify skills gaps, promote career and skills development, evaluate workforce proficiencies, and perform skill-set and resume searches.

IntraLearn e-360 is the first elearning product that enables connected elearning, or "C-learning", by combining powerful skills assessment software, unlimited Icosa Learning Centres, and community-building collaborative tools with a fully integrated elearning platform. C-learning links all members of an enterprise's extended family - suppliers, vendors, employees, sales, resellers, corporate customers and consumers.

IntraLearn LSP

IntraLearn LSP enables learning service providers to offer affordable, feature-rich and individualized elearning systems to their customers while increasing the value of their course and service offerings. IntraLearn LSP gives learning service providers a powerful elearning infrastructure to sell courses, services and individualized IntraLearn learning centers. Embedded with Icosa software, IntraLearn LSP enables multiple IntraLearn systems, or ports, to share a single BackOffice server. Built upon the powerful IntraLearn XE technology, IntraLearn LSP is e-commerce enabled and each port can be converted to its own language and look and feel. A single database repository allows courses to be shared among ports. IntraLearn LSP augments an LSP's core competencies to create a competitive edge unmatched in the elearning industry.
